

PCS Wireless Customer Portal — Open Questions for Stakeholders

Date: July 28, 2026 **For:** Business stakeholder sign-off — Commercial · Finance · Sales · Operations · Product

Scope: Stage 2 — Catalog, Sales Estimates & Sales Orders, and Reorder **Decision options:** Approve (the recommended default) · Change (add a note) · Defer

These are the decisions still open. Removing the spending budget on July 28 closed four earlier questions (OQ-11, OQ-03, OQ-19, OQ-21). Engineering-only decisions are listed separately at the end and are **not** for stakeholder sign-off.

Commercial (Morris / Sal)

OQ	Question	Recommended default	Decision
OQ-02	Is there a direct list-price "buy it now" order path, or is every order reviewed by PCS first?	All-list cart → creates the sales order directly; any custom-priced line → estimate review	
OQ-07	Reorder: create a draft estimate or a direct order, and how do we handle price / stock / grade changes since the last order?	Draft cart pre-filled from the past order, re-validated against current price/stock/grade with any drift flagged	
OQ-13	What is the final approved grade list?	—	
OQ-22	Do we publish grade definitions to customers while some are still marked "to be confirmed"?	—	
OQ-14	Customer pricing tiers per region — definition and setup.	—	
OQ-15	Inventory-visibility rules — defined per customer group, or per customer?	—	
OQ-16	Quantity-display thresholds — e.g. 100+ standard vs 300+/500+ for large wholesalers.	Show exact quantities until confirmed	
OQ-17	Review a competitor's offer / checkout journey before finalising the offer flow.	—	

Finance

OQ	Question	Recommended default	Decision
OQ-30 (new)	With the spending budget removed, do we want any ceiling on open order value, or is past-due the only gate on order creation?	If a ceiling is wanted, use NetSuite's existing credit limit (already counts open orders); otherwise confirm past-due is the only gate	

OQ	Question	Recommended default	Decision
OQ-18	Does being past due block a customer from negotiating an estimate, or only from creating an order ?	Block only at order placement; allow past-due customers to build a cart and negotiate	
OQ-10	Past-due tolerance — how many days / dollars overdue before the block applies?	Define on NetSuite's existing aging buckets (current / 30 / 60 / 90+)	
OQ-28	What is the allowed payment-terms list, and is a PO number required for some accounts?	Default terms come from NetSuite; Finance defines the allowed alternatives (e.g. Net 60, Prepaid/Wire) and any PO-required flag	
OQ-12	Who may request a past-due override?	—	

Sales

OQ	Question	Recommended default	Decision
OQ-09	Estimate validity period and counter-offer round limit?	—	
OQ-29	Can a Rejected estimate be edited and resubmitted?	—	
OQ-23	Is the rep shown on an estimate the NetSuite account rep, or assigned manually?	Pull from the NetSuite account (needs a small integration addition)	

Operations

OQ	Question	Recommended default	Decision
OQ-25	Quantity model — minimum order quantity, pack size, stepper vs free entry, and a cap at available stock?	Steppers of ± 10 , floor of 1, no MOQ / pack / cap (a stock cap depends on OQ-04)	
OQ-26	What does a grade badge show if live inventory carries a grade code with no matching Grade entry?	Neutral-grey fallback badge	
OQ-04	Is stock reserved / held, and how is concurrency handled if two customers order the same units?	Only needed if a stock cap is wanted — and it requires a NetSuite inventory/availability endpoint that does not exist today	

Product

OQ	Question	Recommended default	Decision
OQ-24	Downloadable estimate document — format, content, branding; is there an equivalent for the sales order?	—	

OQ	Question	Recommended default	Decision
Notifications	Notifications of estimate status changes — in-app, email, and/or SMS? (none exist today)	—	

Engineering decisions (for the tech lead — not stakeholder sign-off)

These are settled by the platform's architecture and need only engineering ratification when Stage 2 is scoped:

- **OQ-06** — Estimates and their negotiation held in the portal database; the final sales order written to NetSuite via a new `domain-api` endpoint.
- **OQ-20** — Build a persisted, per-account server-side cart (following the existing per-account persistence pattern).
- **OQ-05** — Wire the live NetSuite `financial-position` endpoint so account standing stops using mock data.
